DNS Sinkholing

Perimeter Security: SSL-VPN Configuration

Remote access is secured via FortiClient VPN, establishing an encrypted tunnel into the network fabric.

Internal Segmentation: Linux Environment.

Adhering to Zero-Trust principles, lateral movement is restricted is restricted.
Policy explicitly permits only ICMP (ping) for diagnostics and SSH (Port 22) for management.

The image shows two overlapping terminal windows. The top window, titled 'kamos@Anon: ~', displays the output of a network test: '9 packets transmitted, 9 received, 0% packet loss, time 8008ms' and 'rtt min/avg/max/mdev = 49.094/56.403/83.555/10.344 ms'. The bottom window, titled 'oaklab@Lnx-IT2: ~', shows a 'Welcome to Ubuntu 22.04.5 LTS' message, system information as of 'Thu Jan 15 06:36:08 PM UTC 2026', and the command 'sudo python3 -m http.server 80' being executed.

```
kamos@Anon: ~  
^C  
9 packets transmitted, 9 received, 0% packet loss, time 8008ms  
rtt min/avg/max/mdev = 49.094/56.403/83.555/10.344 ms  
kamos@Anon:~$  
  
oaklab@Lnx-IT2: ~  
...  
Welcome to Ubuntu 22.04.5 LTS (GNU/Linux 5.15.0-104-generic x86_64)  
  
* Documentation: https://help.ubuntu.com  
* Management:   https://landscape.canonical.com  
* Support:       https://ubuntu.com/pro  
  
System information as of Thu Jan 15 06:36:08 PM UTC 2026  
  
System load: 0.0  
Usage of /: 48.0% of 9.75GB  
...  
Expanded Security Maintenance for Applications is not enabled.  
...  
oaklab@Lnx-IT2:~$ sudo python3 -m http.server 80
```

Verified connectivity to Ubuntu 22.04 LTS host.

Protocol Isolation: Windows RDP Control

Windows environments are isolated with strict access controls. Remote Desktop Protocol (TCP/3389) is governed by a dedicated firewall service object.

Service Verification: Python HTTP Server

To validate the VIP, a Python http.server was deployed. External requests were successfully forwarded to the internal application.

```
oaklab@lnx-IT2:~$ sudo python3 -m http.server 8080
Serving HTTP on 0.0.0.0 port 8080 (http://0.0.0.0:8080/) ...

```
kamoe@Anon:~$
```

Layer 7 Application Control: Social Media.

Deep Packet Inspection (DPI) identifies traffic at the application layer. A rigid block policy is enforced for productivity-draining applications.

Policy Enforcement: User Experience

When a user attempts to access restricted social platforms, the connection is terminated immediately with a clear violation notice.

Corporate Web Filtering

Comprehensive URL filtering sanitizes outbound traffic to reduce liability and optimize network throughput.

```

Active Threat Protection: Antivirus.

The FortiGate Antivirus profile actively scans HTTP/FTP streams. Successful detection of the EICAR test file confirms payload inspection is active.

Intrusion Prevention System (IPS)

Network-based virtual patching is applied via IPS sensors to drop packets containing known exploit signatures.

IPS Signatures		Search

DNS Security: Sinkhole Configuration.

To identify compromised internal hosts, the DNS filter intercepts requests to known botnet domains and redirects them to a monitored Sinkhole IP.

Visibility & Logging

Comprehensive logging is enabled on all firewall policies to ensure **auditability**. Every allowed connection and blocked violation is recorded.

Status	Service	Raw Content
(200 OK)	HTTP	HTTP/1.1 200 OK Accept-Ranges: bytes Content-Length: 783 Content-Type: text/html Date: Sat, 17 Jan 2026 11:28:25 GNT ETag: "b8197ad8a087dc1:0" ETag: "b8197ad8a087dc1:0" Last-Modified: Sat, 17 Jan 2026 11:03:01 GMT Serve...

Technical Constraints & SSL Inspection

In this lab environment, Deep SSL Inspection was **partially implemented**. While firewall logs successfully detected application signatures, full content blocking on HTTPS pages relies on Certificate Authority (CA) deployment on endpoints, which is a planned future enhancement.

Project Status: Completed.

- ✓ SSL-VPN Remote Access
- ✓ **Zero-Trust** Segmentation (Linux/Windows)
- ✓ Virtual IP & Port Forwarding
- ✓ Layer 7 Application Control
- ✓ Corporate Web Filtering
- ✓ AWS/Cloud FQDN Blocking
- ✓ Antivirus & IPS Deployment
- ✓ DNS Sinkhole Setup
